River Street and Logan Street Upgrade

Logan City Council is designing improvements to River Street and Logan Street in Logan Village.

This means designing changes that enhance our urban spaces and inspire walking, playing and meeting. Traffic is slowed and shared areas encouraged. Wide off-road paths will make it easier, safer, and more desirable to walk, ride, scooter and skate. Better drainage means water flows away from the street in heavy rain.

This aligns with our placemaking efforts in Logan Village, with streetscape upgrades a key priority in the Logan Village Implementation Plan logan.qld.gov.au/logan-village/placed-based-projects#loganvillage

Similar upgrades have been recently completed at nearby Storey Road and Manuka Road.

This project is being delivered under Council's Local Roads, Kerbing and Stormwater Program.

Project features

The design includes:

- road improvements and resurfacing
- parallel parking lane on the Logan Village Green side of the road, including in front of the multi-use court and skate park
- new wide shared paths and ramps with street trees and planting
- new kerb, channel and stormwater drainage
- pavement markings, raised crossings and wayfinding signage
- service relocations and verge improvements.
- proposed lower road speed for community safety.

Project benefits

This upgrade design will:

- update and enhance the area
- encourage more options for ways to get around
- create an inclusive, accessible facility
- improve local connectivity.

Next steps

This project is in preliminary design. We will be back in touch as the project moves into the next phases. Construction timing depends on funding availability.
